What is the problem?

DoS face high costs by purchasing individual vendor software licenses for each student, limiting scalability and affordability in training.

Solution

A cost efficient multi-use virtual platform created to “**support**” multiple students at once.

Interviews - 31

What you learned from the interviews?
(Things that changed our understanding of the problem).

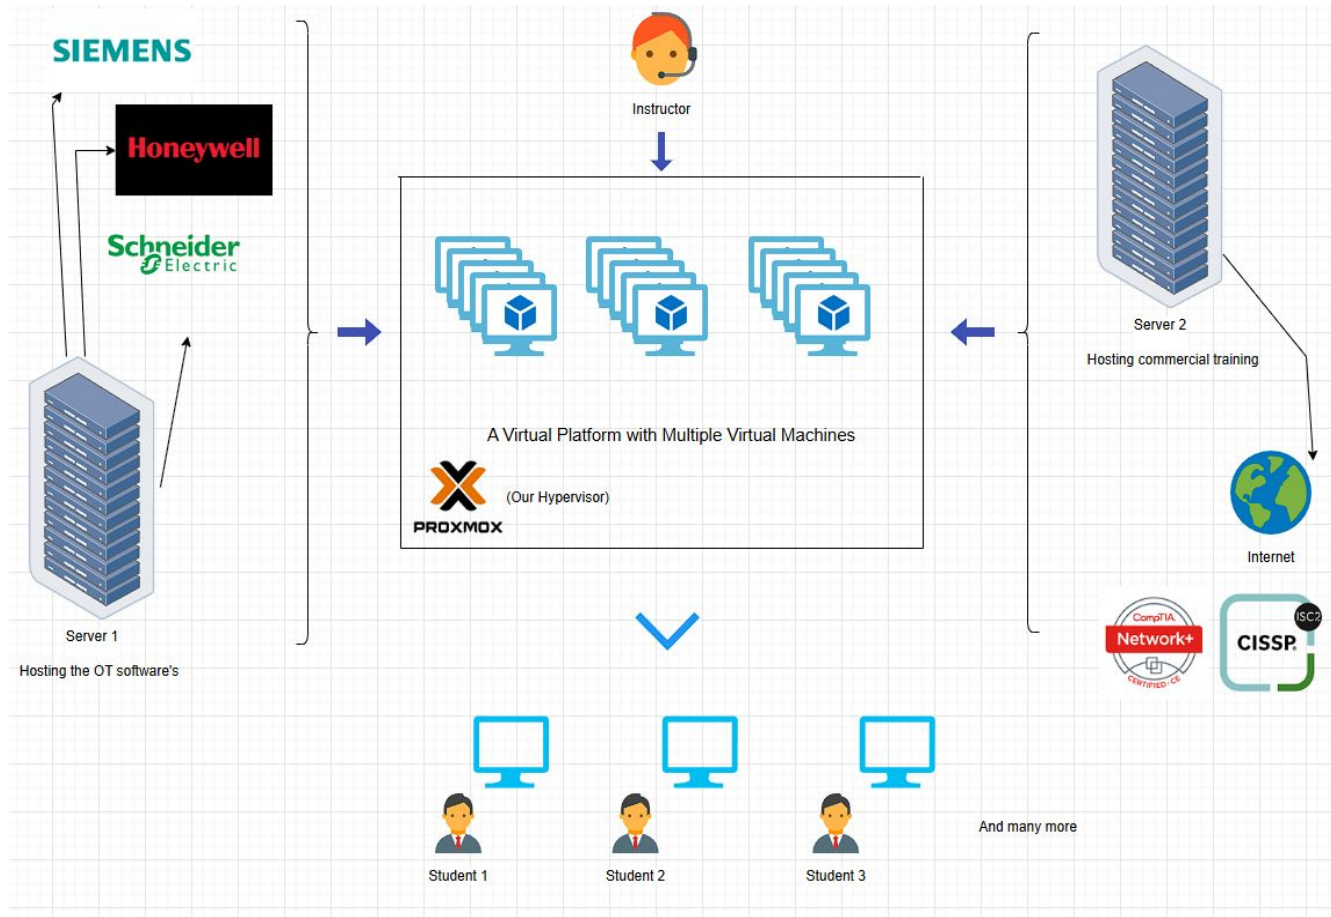

- Making everything virtual would be cost effective and allow them to give specialized specific training related to OT systems.
- Without the virtual platform, the cost of training would increase significantly due to the necessity of paying for each student to costly 3rd party vendors.
- The virtual platform will incorporate curriculum created by the instructional design team and instructors to teach how to secure the OT systems.

Our Value Proposition

A hands-on, cost-effective virtual platform that teaches how to use OT systems, essential networking concepts, and give specific security training built to protect critical infrastructures like embassies.

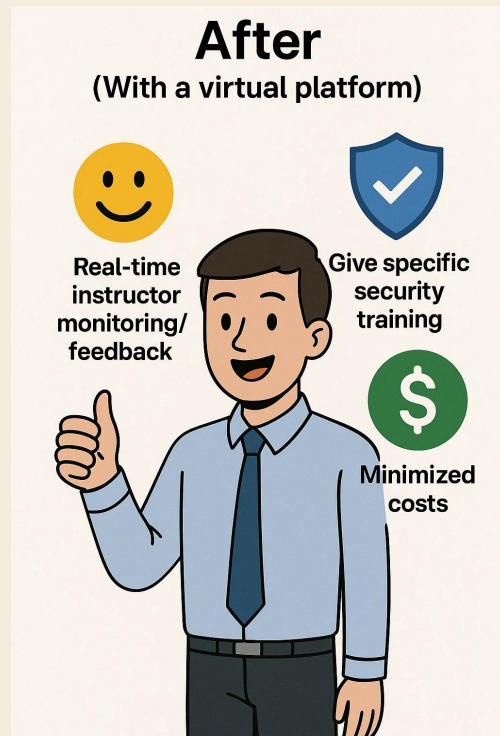

Looks perfect!

MVP

Day to Day Activities of our sponsor

Get-Keep-Grow Diagram

Get (Attract)

- Offering a cost effective Virtual Platform for specialized OT and Commercial training.
- Optimal Performance & benefits other Embassies.

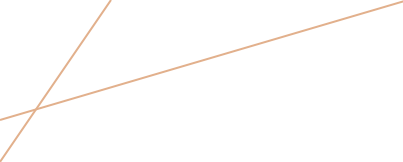

Keep (Retain)

- Supports 60+ students simultaneously.
- Offers hands-on training through 3rd party licensing.

Grow (Expand)

- More customizable options for training.
- Integrate with schools/universities as a better alternative lab.

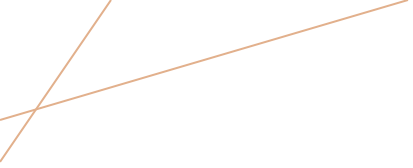

Next Steps

People needed

1. Virtualization architect/ Systems engineer
2. Network engineer
3. Cybersecurity specialist
4. IT Licensing and Procurement Specialist

Product expansion

1. Scale user capacity
2. Add new training modules
3. Enable remote and Global access

Our work so far

Appendix: The Mission Model Canvas (MMC)

Key Partner

Phillip Miyasaka
(Problem Sponsor)
Tena Grest (Instructor), Ben
Hansen (Our OT guy)

Key Activities

- Making a virtual platform to integrate different environments.
- A cost efficient alternative to train.

Value Proposition

1. To audit and secure OT systems when going on diplomatic missions.
2. Sandbox style training on various environments.
3. Get real-time monitoring and feedback.
4. Hands-on security training through certificates.

Buy-in & Support

- Leadership Support
- Financial & Technical Resources
- Stakeholder & Compliance Elements.

Deployment

- Implementation Phases.
- Technical Infrastructure
- User Adoption Strategy

Mission Budget

\$500,000 allocated for building the entire Virtual Network System.

Achievement

Providing a cost-efficient way for hands-on training in a virtual setting.

Beneficiaries

1. OT security personnel (students)
2. Engineers working in Springfield, VA (students)
3. Instructors at the DoS
4. People with no cybersecurity background (Students)

Key Resources

- Technical Infrastructure (like Physical servers and VMs)
- Software Resources (like 3rd vendor softwares for OT environments)
- Knowledge Resources (Content and materials)

APPENDIX: VALUE PROPOSITION CANVAS - (PHILIP, INSTRUCTOR)

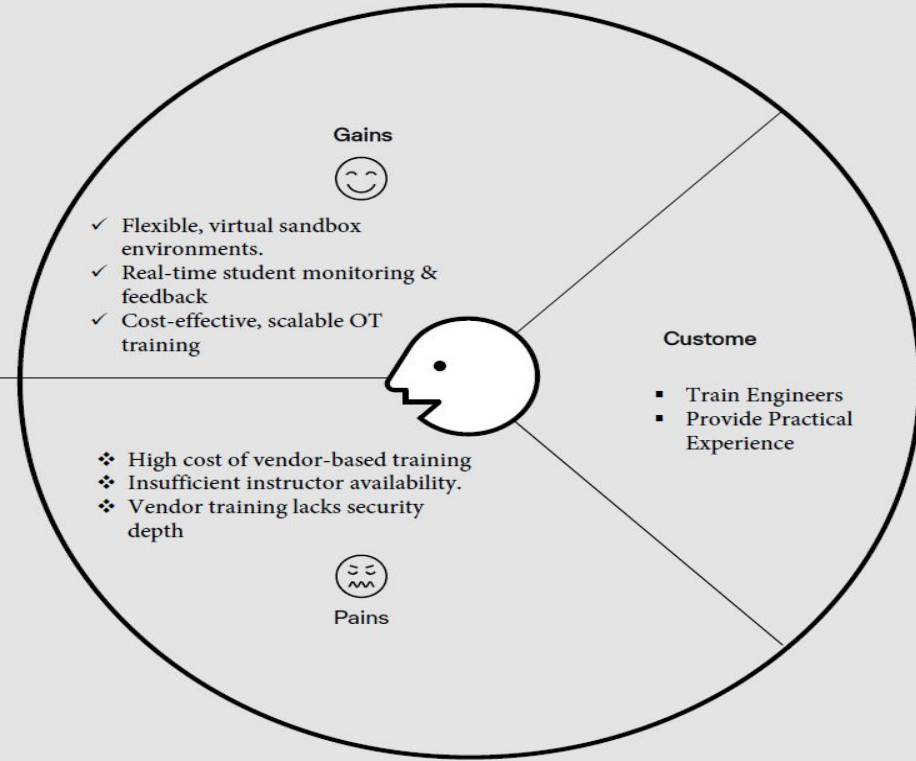

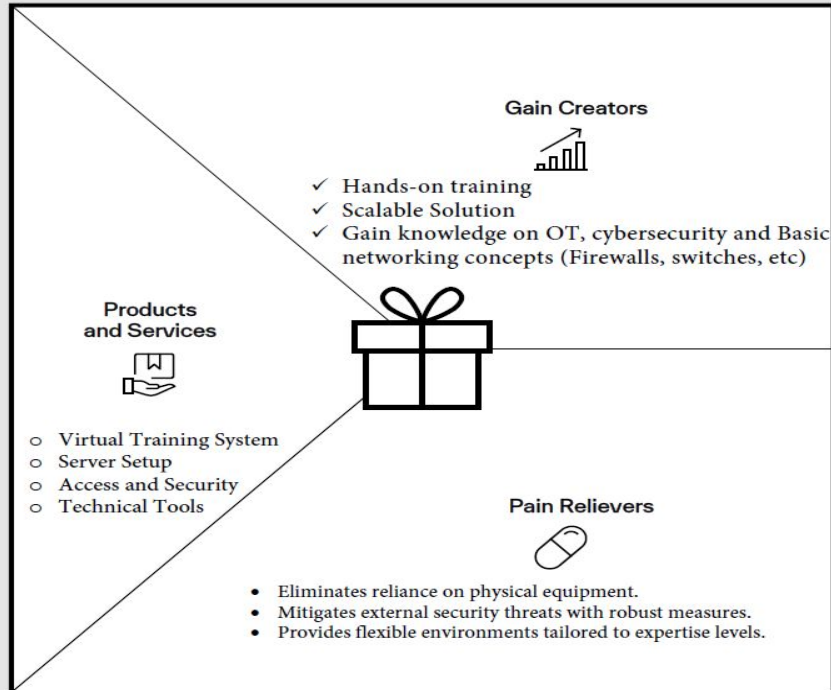

Phillip (Project Sponsor)

The Value Proposition Canvas

Value Proposition:

Flexible, scalable, and secure virtual training platform providing hands-on experience in cybersecurity, OT systems, and IT concepts.

Customer Segment: Engineers in Springfield, Virginia (Department of State) and potential global users (U.S. embassies) seeking practical training in OT security and IT certifications.

APPENDIX: VALUE PROPOSITION CANVAS - (BEN HANSEN)

Ben Hansen

The Value Proposition Canvas

Value Proposition: Specialized OT Security Training Program for DoS Risk Mitigation

Customer Segment: Risk Mitigation Unit and OT Security Personnel at Department of State
